

Reset 60s

Use now. No endless meditation. Your mental Ctrl+Alt+Delete.

1) LOCATE THE STATE (GPS)

Where are you right now? Climb only one level at a time (One-Step Rule).

1 · Survival
fear, alert

2 · Resistance
friction — I know, but don't

3 · Acceptance
the war stops

4 · Flow
efficiency without friction

5 · Resonance
wide presence

2) SYSTEM REBOOT

When the stress loop is in command.

- Optical Command (10 s) — Fix a point ahead. Without moving your eyes, soften focus and see left and right edges at once (panoramic vision).
- Breath Trick (50 s) — Inhale deeply through the nose; at the top, a short extra sip; long slow exhale through the mouth. Repeat 3–5 cycles.
- Notice chest, jaw, mental quiet. You didn't "think positive" — you ran code the body understands.

3) CHEST ANCHOR RESET

When thinking fails and the body alarms.

- Name the load and rate it from 0 to 10.
- Hand on the center of the chest (or light tapping on the collarbone).
- Say 3×: "Even feeling this fear/anxiety, I am safe. I am fully present here."
- Exhale, let the shoulders drop, re-check the number.

4) ONE-STEP RULE + SHORTCUTS

Don't skip rungs. One state at a time.

- Survival → Resistance: hands on thighs/wheel. Box breathing 4-4-4-4 (2×). Ask: "What exactly am I fighting or fleeing right now?"
- Resistance → Acceptance: hand on chest. Physiological sigh 2–3×. Ask: "Can I let this exist for 60 s without fixing or fighting?"

Sometimes you don't need to meditate for a full hour. You need a Ctrl+Alt+Delete.
