

Reset 60s

This is not meditation. It is a manual reboot: you read the hardware, run a command, and feel the system stabilize.

0 · BEFORE—HARDWARE READ (10 s)

Change nothing yet: jaw—clenched or soft? Shoulders—up by the ears? Breath—short in the chest or wide in the belly? On the GPS below, mark the state you are in right now (1 to 5) and hold that number.

1 · LOCATE THE STATE (GPS)—only mark where you are now

Do not judge. Do not skip rungs. One state at a time—the One-Step Rule.

1 Survival

fear, panic,
body on alert

2 Resistance

I know what to do...
but I don't do it

3 Acceptance

the war stops;
"this is what is here"

4 Flow

clean action,
no extra friction

5 Resonance

wide presence,
connection

2 · OPTICAL COMMAND (10 s)—drop the threat-system guard

Fix a point ahead. Without moving your eyes, soften focus until you see the left and right edges of the room at once (panoramic vision). A predator locks on one point; a system in safety sees the field.

3 · BREATH TRICK (≈ 45 s)—the code the body understands

- Inhale deeply through the nose.
- At the top, a short extra sip (like a soft hiccup).
- Exhale long and slow through the mouth—the "sigh" that disarms the alarm.
- Repeat 3 to 5 cycles. Do not force beauty. Force the long exhale.

4 · AFTER—RE-READ THE HARDWARE (≈ 5 s)

Jaw? Shoulders? Breath? How do you feel now? Which state (1 to 5) would you mark this time? If you climbed at least one level on the map: you did not merely stay in "positive thinking"—you ran a command the body understands. If the state seemingly did not change: repeat the cycles again, calmly; the hardware sometimes needs a second update round.

WHAT THE BOOK DOES WITH THIS

Awake OS—The Operating Manual for Your Mind—teaches the full map: the 5 states, which reset to use in each, and how to stop living in Automatic Drift. This card is the emergency reboot. The book is the operating system.

Sometimes you don't need to meditate for a full hour. You only need a "Ctrl+Alt+Del".
